CALL FOR SPONSORSHIP

Background and Objectives

Following on from the first edition released in 2002 and the second in 2006, the Australian Centre for Geomechanics looks forward to launching the third edition of “Paste and Thickened Tailings – A Guide”. The revised edition is being prepared to include the significant advances made in the field since 2006 and will include a number of new chapters on evolving technologies, such as filtering and post thickener polymer injection, as well as different thickening techniques. The ACG intends to again produce guidelines that are such a highly valued and relevant reference for all those working in the mining industry having responsibilities for paste and thickened tailings (P&TT). The guidelines have a broad authorship and will reflect a range of worldwide expertise and experience.

Qualification

The ACG is a not-for-profit University of Western Australia (UWA) research centre. It is controlled by a Board of Management, including Joint Venture Partner representatives, industry representatives and is headed by an industry chairman. All proceeds of its operations in excess of operating expenses are returned to research and training activities. This publication will not be a design manual but rather a guidance and advice manual aimed at providing an overview and understanding of this rapidly evolving technology that is very important to the long term viability of mining.

ACG Publication History

The ACG has a proven record in developing, producing and publishing specialised, unique industry guides as well as international conference proceedings including:

---

[Logos of sponsors like BASF and SNF Australia]
The sponsorship packages have been designed for companies to provide their endorsement of techniques for the management of paste and thickened tailings. We believe that industry’s adoption of best practice principles outlined in these new guidelines will be enhanced by your support and trust that your association with the publication will be of benefit to your company.
